

Make a difference

SQML Gearless Lift Motor

High Riding Comfort
Smooth Start & Stop
Quiet Operation
Energy Saving
66 - 88 poles

EMF Motor[®]

EMF Motor

Only the Best wins ...

Every solution comes from a real understanding of the challenges facing designers and users.

EMF Motor continues to be a company made of innovative individuals striving to design, create and build products and solutions that help to improve industrial technology. We design our products for durability and we test them rigorously to ensure the highest levels of reliability.

Our products are the **“next big thing”** in electric motors. Our patented technology provides the ground to attract world’s most talented and motivated engineers. EMF Motor products will benefit design engineers to innovate compact products that will respond to the increasing demand from customers.

“Precise motion” is our focus. SQM Torquemotor can distinctly differentiate your product, your efficiency and your operations and deliver a market place advantage by improving its performance. This means totally increased efficiency which is the expectation within every company. Perfectly deployed motion can make your product more reliable and efficient and enhance accuracy.

How is this all possible? What is so different about the SQM Torquemotor?

SQM Torquemotor works with a patented motor principle that is most suitable for applications with high torque at low speed. SQM Torquemotor is a synchronous machine and the windings have no influence on the pole number. The high pole number is achieved by intelligent magnetic field.

As a result SQM Torquemotor, as a direct drive, offers great advantages in all performance criterias, such as very high energy efficiency, high dynamics, high overload capacity, quiet and practically maintenance free operation.

SQML Gearless Lift Motor

- SQML Gearless Lift Motor uses Patented EMF Motor Technology
- The highest efficiency by far
- Excellent ride comfort
- Quite A3 safety brake
- Compact design
- No heating issue, fan is not needed on the motors, suitable for heavy traffic

The patented EMF Motor® Technology

High pole number advantages:

- Large frequency range
- 66 poles offer more than 4 times higher frequency range compared to a 16-pole motor.
- Excellent comfort even at 0,15 m/sec. at 1:1 suspension.
- Smooth and precise acceleration and deceleration

SQML 73

- World's smallest gearless lift motor
- 320 kg to 600 kg capacity
- 120 mm and 160 mm sheave option
- 220 V and 380 V option in the same motor. (via changing star-delta connection)
- 66 poles

Static Load 1.200 kg

EMF Motor reserves the right to amend dimensions, technical data and design specification without prior notification.

Caution

- Plastic coated rope*
- 85% lift shaft efficiency is considered for the calculations
- Travel distance 15 m
- Mayr Safety Brakes
- Brake supply voltage is 207 VDC.
- Heidenhain ECN1313 EnDat encoder is standard. Please contact us for BiSS option
- Duty cycle is S3 20%
- 90 start/hour for 120 mm sheave diameter and 180 starts/hour for 160 mm sheave diameter
- Counterweight 50 %
- Static Load : 1.200 kg

SQML 100

- From 320 kg to 630 kg carrying capacity
- 160 mm, 210 mm and 240 mm traction sheave options
- Compact design
- 1:1 and 2:1 suspension options

Static Load 1.700 kg

EMF Motor reserves the right to amend dimensions, technical data and design specification without prior notification.

Caution

- Certificated rope must be used
- Drako 250T rope type is considered for the calculations of motors with 210 mm and 240 mm sheave.
- Drako PTX300 5/6,5 ($\mu=0,25/0,5$) is considered for the motors with 160 mm sheave
- Heidenhain ECN1313 EnDat encoder is standard. Please contact us for BiSS option
- Mayr Safety Brake
- Brake supply voltage is 207 VDC.
- 80% lift shaft efficiency is considered for the calculations.
- Compensation rope must be used over 24 m travel distance. Please contact us for applications without compensation rope
- Sheave groove angle is 50° for 210 mm and 240 mm diameter sheaves.
- Sheave channel type is U type for 160 mm sheave and channel angle is 45°.
- Hardness of the sheaves is 46-50 HRC

Please contact us for other load capacities.

Let the elevator work without power!

Elevator can work more than 200* rides at same comfort and speed when the power is cut

System works as a hybrid elevator;

When the motor brakes, the generated energy charges the batteries

High Energy Saving by regenerative energy

The stored energy in the batteries provides very low energy consumption even power is on

When power is cut, the charged energy ensures full speed and load ride without interruption

**High
Energy
Saving
(up to 70 %)**

**By power cut
more than
200* rides
at same comfort
and speed**

**No Stop
No Fear**

- By programming the system, the network energy can be used only at daily cheap tariff so the savings can be increased.
- Min. 200* times operation without network energy! When there is power cut during travelling, there won't be interruption in the cabin and elevator will continue to be operated with same speed and comfort.
- No need regular UPS!
 - Batteries in the GM system have much longer life time compared to regular UPS since they are always outlive.

The components of Green Motion

In this system, the inverter must be single ph. 220 V and EMF Motor will be 3ph 220 V.

- 3 ph x 220 V EMF Lift Motor
- Green Motion Card by EMF Motor
- Inverter 24 VDC to 220 VAC
- 22 x 12 V lead acid batteries
- 24 VDC power supply
- 1 ph x 220 V driver

** 200 times will be changed according to speed, load and battery capacity*

Green Motion 220 V

- Up to 1.250 kg carrying capacity
- 240 mm and 320 mm traction sheave options
- 1:1 and 2:1 suspension options
- The motors are 3 phase 220 V and working with single phase 220 V driver.

Suspension	Motor Nr.	Motor Code	Load Capacity kg	Traveling Speed m/s	Traction Sheave mm	Rope Number x mm	Rated Torque nm	Rated Speed d/d	Rated Current A	Rated Power kW
1:1	a	132-160	400	1,0	Ø240	8 x 6,5	345	80	15	2,9
	b	132-160	480	1,0	Ø240	9 x 6,5	410	80	17	3,4

EMF Motor reserves the right to amend dimensions, technical data and design specification without prior notification.

Caution

- Motor dimensions are the same as 380 V versions, only the voltage is 3 phase 220 VAC.
- Used 6.5 mm rope must be certified.
- All calculations have been made due to Drako 250T rope type.
- Heidenhain ECN1313 EnDat encoder is standard. Please contact us for BiSS option
- Shaft efficiency is considered as 80 % in all calculations
- Compensation rope must be used over 24m travel distance. Please contact us for applications without comp. rope
- Travel distance is considered 35-45 m for 2 m/s and higher cabin speeds.
- Sheave angles for 210 mm and 240 mm are 50°, for 320 mm and 400 mm they are 45°.
- The hardness rate of our sheaves is 46-50 HRC.

Please contact us for other load capacities.
