Flange nut FM
Standard nut for simple applications

Duplex nut DM
- Bellows can be attached both sides
- Uniform Ø on gearbox neck, nut and opposed bearing plate
- Grease nipple or connection to central lubrication or lubricator

Safety nut SIFA
In combination with duplex nut or self-aligning nut

Self-aligning nut PM
- Angular compensation up to max. 3°
- Bellows can be attached both sides
- Uniform Ø on gearbox neck, nut and opposed bearing plate
- Grease nipple or connection to central lubrication or lubricator

Greaseless nut FFDM
- Specially suitable for dry running (such as textiles, foodstuffs, chemicals,...)
- Bellows can be attached both sides
- Reinforced with a stainless steel washer

Application

(Welded) fabrications often exhibit angular errors, which lead to rapid wear of the trapezoidal screw nuts. The self-aligning nut PM can compensate small angular errors on the attachment face up to maximum +/-3°. A large grease reservoir increases the maintenance intervals and extends the service life

CAUTION

Self-aligning nuts cannot compensate parallelism errors between screws or between screws and guides. Take care to ensure precise alignment. The attachment faces for the gearboxes must therefore be exactly at right angles to the guides.

Opposed bearing plate | rotating version

Opposed bearing plate GLP

The opposed bearing plate increases the smoothness of operation and the resistance of the screw to buckling. Allow 5 mm at the end of the screw for length compensation. The ball bearing is already mounted on delivery.
