#### Ethernet IP display and setting switch (SW1, SW2):

The value of the fourth digit of Ethernet IP can be set through the setting switch. Set the product's IP not to overlap with other connected products. The first, second and third values of the IP can be set through the GUI. Please refer to the manual for details. When the switch is set to 255 (FF), IP is set automatically, ignoring the setting. (DHCP function) The fourth digit of the Ethernet IP is displayed in 7-Segment.

Ex) In case of Sw1 : 7 and Sw2 : 5  
 $(5 \times 16) + (7 \times 1) = 87$   
IP is to be set as 192.168.0.87

#### CAUTION

Please refer to the Manual when connecting the motor extension cable.

Carefull connection will be required to protect the drive from any damages.

※When connecting the I/O cables between the controller and drive, please turn off the power of both controller and drive to protect the drive from any damage.

## Software

A simple user interface software can be used to parameterize the drive, perform simple test movements, set drive parameters, and more.
